

# Fonix Releases VoiceCompress™ 1.0

## New product compresses audio files, frees up device memory

**SALT LAKE CITY, UT (October 11, 2006)** Fonix Speech, Inc., a wholly owned subsidiary of Fonix Corporation (OTC BB: FNIX) specializing in embedded speech interfaces for mobile devices, handheld electronic products and systems and processors, releases Fonix VoiceCompress™ 1.0 – a new Fonix product that compresses audio files. VoiceCompress is available to mobile device manufacturers and software application developers directly from Fonix, either as a stand-alone SDK or bundled with other Fonix speech interface solutions such as text-to-speech (TTS) or automatic speech recognition (ASR); call (801) 553-6600 and say “Sales.”

Fonix VoiceCompress allows application developers and device manufacturers to significantly compress audio files, freeing up device memory for other functions. This tool is particularly useful for e-dictionaries, games, toys and other embedded devices where developers are working with limited memory and looking for ways to maximize processing power in order to add more device features and functions. Fonix VoiceCompress enables developers to compress large audio files while maintaining a high level of audio quality.

“VoiceCompress is an extremely beneficial solution for helping our customers save device memory and reduce product costs,” says Walt Nawrocki, Senior VP and GM, Fonix Speech. “Our customers require efficient resources to deliver economical embedded applications. Fonix TTS and ASR are specifically created for limited-memory devices, and this new software solution is another compelling technology for developers looking to save even more memory. By decreasing product memory requirements, manufacturers ultimately lower development costs and extend battery life for devices. It’s a win-win situation.”

Fonix VoiceCompress 1.0 is available from Fonix’s professional sales team by calling (801) 553-6600 and saying, “Sales.”
