

Fonix Speech Technology Utilized in Major Video Game Release in 2007

Hugely Successful Virtual Rock n' Roll Video Game utilized "VoiceIn" Speech to Text Technology Developed by Fonix Speech, Inc.

SALT LAKE CITY, UT (January 3, 2008) Fonix Speech, Inc., a wholly owned subsidiary of Fonix Corporation (OTC BB: FNIX), announced this week that a top game in the hottest sector of the video gaming market utilizes a Fonix Speech software engine. This particular, karaoke-style video game, which was released to the public November 20, 2007, experienced overwhelming initial success in a unique sector of the gaming market made popular over the last few years by the video game Guitar Hero.

Fonix Speech's "VoiceIn" technology is the only software currently available to game developers that permits voice-activated interface across all major platforms, including Xbox, Playstation2, PC and Mac versions. The video game makes significant use of the VoiceIn technology, as specific gamer voice direction and participation is at the heart of this particular video game's functionality.

Fonix Corporation is especially excited about this relationship with the makers of the rock n' roll karaoke-style video game, as this recent release is only a first edition of a planned series of video games. The wildly successful Guitar Hero has released three major editions of its game to date, with each game generating more and more publicity.
